Election of Species

This application contains claims directed to the following patentably distinct species of the claimed invention:

In amended claims 1, 11 and 35, the inventions are to a polymer electrolyte membrane comprising a first polymer comprising acidic subunits and a second polymer comprising basic subunits, wherein (i) at least one of said first or second polymers is an elastomeric copolymer further comprising elastomeric subunits, or (ii) the polymer electrolyte membrane further comprises an elastomeric polymer comprising elastomeric subunits. The species are:

(I) at least one of said first or second polymers is an elastomeric copolymer further comprising elastomeric subunits.

(II) the polymer electrolyte membrane further comprises an elastomeric polymer comprising elastomeric subunits.

Upon electing the chosen species, the applicant must choose the further subgroups of species that correspond to the species unit elected in the previous paragraph. The subgroups are:

(a) In claim 1, the new limitation includes the limitation that the basic subunits are subunits are selected from the group consisting of vinylimidazole, benzothiazoles, quinolines, ethyleneimines, vinylpyridine, allylamine, and mixtures thereof. The applicant is required to choose the appropriate basic subunit for examination.

Art Unit: 1745

(b) In claim 11, the added limitation is that the membrane has an electrical conductivity greater than about 0.005 S/cm.

(c) In claim 35, the new limitations include wherein said acidic subunits are selected from the group consisting of sulfonic acid groups, phosphoric acid groups and mixtures thereof, wherein said elastomeric subunits are selected from the group consisting of nitrile groups, vinylidene fluoride groups, siloxane groups, phosphazine groups, and mixtures thereof. The applicant is required to choose the combination of subunits for examination.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no species is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to

Art Unit: 1745

be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
